Aae35327

The present invention describes a monoclonal antibody which can react specifically with ganglioside GD3. The antibody and its derivatives are useful in the diagnosis and therapy of tumours, particularly cancer diagnosis. The present sequence is a protein used in the exemplification

Claim 39; Page 175-179; 183pp; Japanese.

New human type complementation-determining region-transplanted antibody and derivatives against ganglioside GD3, useful in diagnosis and therapy of e.g. tumors, with low antigenicity, little side effects but potent activity in cancer.

The antibody and its derivatives are useful in the diagnosis and therapy of tumours, particularly cancer diagnosis. The present sequence is a protein used in the exemplification of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Claim 41; Page 168-172; 183pp; Japanese

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention relates to novel recombinant anti-EpCAM (human epithelial cell adhesion molecule) antibodies comprising an amino acid sequence defining an immunoglobulin light or heavy chain framework region. Sequences of the present invention are useful for the diagnosis, prognosis and treatment of cancer. They are also used in gene therapy. The present sequence is KS antibody heavy chain-interleukin 2 (IL-2) fusion protein. This sequence is used to illustrate the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New recombinant anti-EpCAM antibody having an amino acid sequence defining an immunoglobulin light or heavy chain framework region, for the diagnosis, prognosis and treatment of cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Immunoglobulin;

                                                                                                                                                                            The invention relates to cytokine fusion proteins with increased therapeutic index and methods for increasing the therapeutic index of such fusion proteins. The fusion protein comprises a non-interleukin-2 (IL-2) moiety fused to a mutant IL-2 moiety. It is useful for preparing a composition for treating cancer, viral infections or immune disorders. The fusion protein is also used in gene therapy. The present sequence is dI-KS-ala-IL2 (D20T) variant protein comprising dI-KS heavy chain fused to human IL-2 (D20T) variant protein. This sequence is used to illustrate the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                        New fusion protein comprising a non-IL-2 moiety fused to a mutant IL-2 moiety, useful for preparing a composition for treating cancer, viral infections or immune disorders.

The antibody and its derivatives are useful in diagnosis and therapy of tumours, particularly cancer diagnosis. The present sequence is a protein used in the exemplification of the invention

An antibody variable region of the invention cytostatic activity, and may have a use in gene therapy. The antibod be used for treating cancer. The nucleic acid or cell is useful for manufacturing a medicament that may be used for treating diseases surcancer. The present sequence represents an immunoglobulin heavy chair 2 fusion protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Seguence

                                                                                                                                                                                                                              The invention relates to cytokine fusion proteins with increased therapeutic index and methods for increasing the therapeutic index of such fusion proteins. The fusion protein comprises a non-interleukin-2 (IL-2) moiety fused to a mutant IL-2 moiety. It is useful for preparing a composition for treating cancer, viral infections or immune disorders. The fusion protein is also used in gene therapy. The present sequence is Gl-NHS76 (gamma4h) (FN>AQ)-ala-IL2 (D2OT) variant protein comprising dI-KS heavy chain fused to human IL-2 (D2OT) variant protein. This sequence is used to illustrate the method of the invention
                                                                                                                                                                                                              Sequence 580 AA;
                                                                                                                                                                                                                                                                                                                             Example 10;
                                                                                                                                                                                                                                                                                                                                               New fusion protein comprising a non-IL-2 momoiety, useful for preparing a composition infections or immune disorders.

                                      such fusion proteins. The fusion protein comprises a non-interleukin-2 (II-2) molety fused to a mutant II-2 molety. It is useful for preparing a composition for treating cancer, viral infections or immune disorders. The fusion protein is also used in gene therapy. The present sequence is dI-NNS76 (gammazh) (FN-AQ)-ala-II-2 (D20T) variant protein comprising dI-KS heavy chain fused to human II-2 (D20T) variant protein. This sequence is used to illustrate the method of the invention

These are derived from the murine LT-beta-R binding antibody CBE11 and can be used to treat neoplasia in humans. The present sequence is a humanised murine CBE11 heavy chain variable region
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New humanized anti-lymphotoxin-beta receptor antibody, useful for treating or reducing the advancement, severity or effects of neoplasia, particularly solid tumors (i.e. carcinomas) including colorectal cancer and breast cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Example 5; Page 25-26; 41pp; English.

The artificial proprotein and polynucleotides are useful for artificial multimeric protein engineering, e.g. antibodies and antibody fragments in eukaryotes. This sequence corresponds to a protein used in the generation of the protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New artificial proprotein comprises three peptide sequences, useful artificial multimeric protein engineering in eukaryotes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           03-OCT-2003; 2003WO-US031420

The artificial proprotein and polymucleotides are useful for artificial multimeric protein engineering, e.g. antibodies and antibody fragments in eukaryotes. This sequence corresponds to a protein used in the generation of the protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  artificial proprotein;

                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to the production of a methylotroph yeast that produces mammalian sugar chains, comprising disrupting the OCH1 gene in the yeast that encodes for alpha-1,6-mannosyl transferase and inserting and expressing the alpha-1,2-mannosidase gene. The specification also includes DNA sequences encoding: (a) orotidin-5'-phosphate decarboxylase (URA3); (b) phosphoribosyl-amino-imidazole succinocarboxamide synthase (AAE1); (c) imidazole-glycerol-phosphate dehydratase (HIS3); (d) 3-10 cisopropyl malate dehydrogenase (LEU2); (e) alpha-1,6-mannosyl transferase (OCH1); (f) proteinase A (PEP4); (g) proteinase B (PRE1); and (h) aspartic protease (YPS1), mannosyl transferase (KTR1 or MNN9), alcohol oxidase (AOX) and glyceraldehyde 3-phosphate dehydrogenase (GAPDH) gene sequences. The yeast is used for the production of human and mammalian high mannose glycoproteins with high yield and purity. The method is also useful for producing hybrid or complex sugar chains containing mammalian type chains. This sequence represents a mouse anti-human G-CSF antibody heavy chain used in the invention.
                                                                                                                                                                                                                                          Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  밁
                   The sequences (AAQ54651-52) show the light and heavy chain cDNAs of murine T84.12. The T94.12 antibody is directed against the tumour marker carcinoma embryonic antigen, and is useful for tumour imaging and immunotherapy. The amino acid sequence given in the specification has been incorrectly identified as a nucleic acid sequence, therefore unacceptable characters have been represented as an 'N'. The amino acid sequence given below has been derived from the cDNA, by the indexer. (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                                                                                  New chimeric T 84.12 antibody active against carcinoembryonic antigen - has murine variable and human constant regions, also DNA encoding it and transformed myeloma cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Chimeric; carcinoembryonic antigen; CCA; murine; mouse; constant; region; transform; myeloma cell; light chain; tumour.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Shively JE,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            (YANG/)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Synthetic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              25-MAR-2003
